9	ME-215N	Mechanics of Solid Lab	0	0	2	2	0	40	60	100	3
		Total	18	7	6	31	450	270	180	900	
10	MPC-201N	Environmental Studies*	3	0	0	3	75	25	0	100	3

^{*}MPC-201N is a mandatory course and student has to get passing marks in order to qualify for the award of degree but its marks will not be added in the grand total.

	B. Tech. 3 rd Semester Mechanical Engineering											
Course No.	Course Title	Teaching Schedule			Allotn	nent of Ma	ırks	Duration of Exam (Hrs.)				
		L	L T P		Theory	Sessional	Total					
AS-201N	MATHEMATICS-III	3	1	0	75	25	100	3				
Purpose	To acquaint the students series and transforms, Co						Program	ming problems, Fourier				
	Course Outcomes (CO)											
CO-1	This section is concerned mainly with Fourier series. However, the underlying ideas can also be extended to non-periodic phenomena. This leads to Fourier integrals and transforms which are very much useful in solving the initial and boundary value problems.											
CO-2	Students will learn about order PDE of any deg addition, how to solve separable method and LI	ree hon	by noge	using neou	g Charpit's is linear PD	method w DE with cor	ill be d	iscussed in details. In				
CO-3	Complex analysis is con and their detailed knowl problems.											
CO-4	Probability theory provides models of probability distributions (theoretical models of the observable reality involving chance effects) to be tested by statistical methods which has various engineering applications, for instance, in testing materials, control of production processes, robotics, and automation in general, production planning and so on.											

UNIT-I

Fourier Analysis

Fourier series: Euler's formulae, Orthogonality conditions for the Sine and Cosine function, Dirichlet's conditions, Fourier expansion of functions having points of discontinuity, Change of interval, Odd and even functions, Half-range series.

Fourier Transforms: Fourier integrals, Fourier transforms, Fourier Cosine and Sine transforms, Properties of Fourier transforms, Convolution theorem, Parseval's identity, Fourier transforms of the derivative of a function, Application of transforms to boundary value problems (Heat conduction and vibrating string).

UNIT-II

Partial Differential Equations and LPP

Formation and Solutions of PDE, Lagrange's Linear PDE, First order non-linear PDE, Charpit's method, Homogeneous linear equations with constant coefficients, Method of separation of variables.

Solution of linear programming problems: using Graphical and Simplex methods.

UNIT-III

Theory of Complex Variables

A review of concept of functions of a complex variable, Limit, continuity, differentiability and analyticity of a function. Basic elementary complex functions (exponential functions, trigonometric & Hyperbolic functions, logarithmic functions) Cauchy-Riemann Equations.

Line integral in complex plane, definition of the complex line integral, basic properties, Cauchy's integral theorem, and Cauchy's integral formula, brief of Taylor's, Laurent's and Residue theorems (without proofs).

UNIT-IV

Probability theory:

A review of concepts of probability and random variables: definitions of probability, addition rule, conditional probability, multiplication rule, Conditional Probability, Mean, median, mode and standard deviation, Bayes' Theorem, Discrete and continuous random variables, probability mass, probability density and cumulative distribution functions, mathematical expectation, moments, moment generating function. **Standard Distributions:** Binomial, Poisson and Normal distribution.

References Books:

- 1. E. Kreyszig: Advanced Engineering Mathematics, Wiley India.
- 2. B. V. Ramana: Engineering Mathematics, Tata McGraw Hill.
- 3. R.K. Jain, S.R.K. Iyengar: Advanced Engineering Mathematics, Taylor & Francis.
- Murray R. Spiegel: Schaum's Outline of Complex Variables, McGraw Hill Professional.
- 5. Michael D. Greenberg: Advanced Engineering Mathematics, Pearson Education, Prentice Hall.

Note: Examiner will set eight questions by selecting two from each unit. Students will be required to attempt five questions selecting at least one question from each unit.

HS-201N	FUNDAMENTALSOF	3	0	0	75	25	100	3		
	MANAGEMENT									
Purpose To understand the concept and techniques of controlling and new trends in management										
	Course Outcomes (CO)									
CO-1	An overview about manag	geme	ent as	a discij	oline and its	evolution				
CO-2	Understand the concept ar	nd ir	nporta	ince of	planning an	d organizing	in an org	ganization		
CO-3	Enabling the students t workforce by understandetail				•		_			
CO-4	To understand the concep	t and	d techi	niques	of controllin	g and new to	rends in n	nanagement		

- **1.Introduction to Management:** Meaning, Definition, nature, importance & Functions, Management as Art, Science & Profession- Management as social System, Concepts of management-Administration
- **2.Evolution of Management Thought**: Development of Management Thought- Scientific management, Administrative Theory of Management, Bureaucratic Organization, Behavioral approach (Neo Classical Theory): Human Relations Movement; Behavioral Science approach; Modern approach to management Systems approach and contingency approach.

UNIT-II

- **3.Planning**: nature, purpose and functions, types of plans, planning process, Strategies and Policies: Concept of Corporate Strategy, formulation of strategy, Types of strategies, Management by objectives (MBO), SWOT analysis, Types of policies, principles of formulation of policies
- **4.Organizing**: nature, importance, process, organization structure: Line and Staff organization, Delegation of Authority and responsibility, Centralization and Decentralization, Decision Making Process, Decision Making Models, Departmentalization: Concept and Types (Project and Matrix), formal & informal organizations

UNIT-III

- **5.Staffing**: concept, process, features; manpower planning; Job Analysis: concept and process; Recruitment and selection: concept, process, sources of recruitment; performance appraisal, training and development
- **6.Directing**: Communication- nature, process, formal and informal, barriers to Effective Communication, Theories of motivation-Maslow, Herzberg, McGregor; Leadership –

concept and theories, Managerial Grid, Situational Leadership. Transactional and Transformational Leadership.

UNIT-IV

7.Controlling: concept, process, types, barriers to controlling, controlling Techniques: budgetary control, Return on investment, Management information system-MIS, TQM-Total Quality Management, Network Analysis- PERT and CPM.

8. Recent Trends in Management: -

Social Responsibility of Management–Management of Crisis, Total Quality Management, Stress Management, Concept of Corporate Social Responsibility (CSR) and business ethics. Functional aspects of business: Conceptual framework of functional areas of management-Finance; Marketing and Human Resources

Text books

- 1. Management Concepts Robbins, S.P; Pearson Education India
- 2. Principles of Management Koontz &O'Donnel; (McGraw Hill)

Recommended books

- 1. Business Organization and Management Basu; Tata McGraw Hill
- 2. Management and OB-- Mullins; Pearson Education
- 3. Essentials of Management Koontz, Tata McGraw-Hill
- 4. Management Theory and Practice Gupta, C.B; Sultan Chand and Sons, new Delhi
- 5. Prasad, Lallan and S.S. Gulshan. *Management Principles and Practices*. S. Chand& Co. Ltd., New Delhi.
- 6. Chhabra, T.N. Principles and Practice of Management. DhanpatRai& Co., Delhi.
- 7. Organizational behaviour Robins Stephen P; PHI.

Note: Examiner will set eight questions by selecting two from each unit. Students will be required to attempt five questions selecting at least one question from each unit.

	B. Tech. 3 rd Semester Mechanical Engineering											
Course No.	Course Title	Tea	achir	ıg	Allotn	nent of Ma	arks	Duration				
		Sch	edul	le				of Exam				
		L	T	P	Theory	Sessional	Total	(Hrs.)				
ME-201N	BASIC	3	1	0	75	25	100	3				
	THERMODYNAMICS											
Purpose	The objective of this course is to make the students aware of Energy, Entropy,											
	Equilibrium, various laws of thermodynamics and relations. The course will help											
	the students to build the fundamental concepts in order to solve engineering											
	problems.											
	Cou	rse (Outc	omes	(CO)							
CO-1	State the thermodynamic sy	ysten	n, pro	operti	es and equ	ilibrium. D	Describe	the ideal and				
	real gas laws.											
CO-2	Analyze and solve the first	t and	seco	nd la	w of therm	odynamic	s probler	ns.				
CO-3	Define entropy and its c	hang	e fo	r diff	erent prod	cesses and	l also so	olve entropy				
	problems							NOTATE .				
CO-4	Describe the Availability	y ar	nd u	navai	lability fo	or steady	and un	steady flow				
	processes. Also understand	the	conc	ept of	irreversib	ility.						
CO 5	Solve the problems relate	ed to	Ste	am a	nd plot th	ne process	es on F	I-S and T-S				
	diagram. Understand therm	ody	nami	cs rela	ations.							

Thermodynamics: Macroscopic Basic Concepts: and Microscopic Approach, Thermodynamic Systems, Surrounding and Boundary, Thermodynamic Property – Intensive and Extensive, Thermodynamic Equilibrium, State, Path, Process and Cycle, Quasi-static, Reversible and Irreversible Processes, Working Substance. Concept of Thermodynamic Work and Heat, Equality of Temperature, Zeroth Law of Thermodynamic and its utility. Ideal and Real Gases: Concept of an Ideal Gas, Basic Gas Laws, Characteristic Gas Equation, Avagadro's law and Universal Gas Constant, P-V-T surface of an Ideal Gas. Vander Waal's Equation of state, Reduced Co-ordinates, Compressibility factor and law of corresponding states. Mixture of Gases, Bass, Mole and Volume Fraction, Gibson Dalton's law, Gas Constant and specific Heats, Entropy for a mixture of Gases.

UNIT II

First Law of Thermodynamics: Energy and its Forms, Energy and 1st law of Thermodynamics, Internal Energy and Enthalpy, 1st Law Applied to Non-Flow Process, Steady Flow Process and Transient Flow Process, Throttling Process and Free Expansion Process. Numerical

Second Law of Thermodynamics: Limitations of First Law, Thermal Reservoir Heat Source and Heat Sink, Heat Engine, Refrigerator and Heat Pump, Kelvin- Planck and Clausius Statements and Their Equivalence, Perpetual Motion Machine of Second Kind. Carnot Cycle, Carnot Heat Engine and Carnot Heat Pump, Carnot's Theorem and its Corollaries, Thermodynamic Temperature Scale, Numericals

UNIT III

Entropy: Clausius Inequality and Entropy, Principle of Entropy Increase, TemperatureEntropy Plot, Entropy Change in Different Processes, Introduction to Third Law of thermodynamics. Availability, Irreversibility and Equilibrium: High and Low Grade Energy, Availability and Unavailable Energy, Loss of Available Energy Due to Heat Transfer Through a Finite Temperature Difference, Availability of a Non-Flow or Closed System, Availability of a Steady Flow System, Helmholtz and Gibb's Functions, Effectiveness and Irreversibility. Numericals.

UNIT IV

Pure Substance: Pure Substance and its Properties, Phase and Phase Transformation, Vaporization, Evaporation and Boiling, Saturated and Superheat Steam, Solid – Liquid – Vapour Equilibrium, T-V, P-V and P-T Plots During Steam Formation, Properties of Dry, Wet and Superheated Steam, Property Changes During Steam Processes, Temperature – Entropy (T-S) and Enthalpy – Entropy (H-S) Diagrams, Throttling and Measurement of Dryness Fraction of Steam. Numericals.

Thermodynamic Relations: T-Ds Relations, Enthalpy and Internal Energy as a Function of Independent Variables, Specific Heat Capacity Relations, Clapeyron Equation, Maxwell Relations.

Text Books:

Introduction: Force, types of forces, Characteristics of a force, System of forces, Composition and resolution of forces, forces in equilibrium, principle and laws of equilibrium, Free body diagrams, Lami's Theorem, equations of equilibrium, Concept of center of gravity and centroid, centroid of various shapes: Triangle, circle, semicircle and trapezium, theorem of parallel and perpendicular axes, moment of inertia of simple geometrical figures, polar moment of inertia. Numerical Problems

Simple stresses &strains: Concept & types of Stresses and strains, Polson's ratio, stresses and strain in simple and compound bars under axial loading, stress strain diagrams, Hooks law, elastic constants & their relationships, temperature stress & strain in simple & compound bars under axial loading, Numerical problems.

UNIT-II

Principle stresses: Two dimensional systems, stress at a point on a plane, principal stresses and principal planes, Mohr's circle of stresses, Numerical.

UNIT-III

Torsion of circular Members: Derivation of equation of torsion, Solid and hollow circular shafts, tapered shaft, stepped shaft & composite circular shafts, Numerical problems.

Tredesiale Space.com

Kurukshetra University, Kurukshetra (w.e.f. 2015-16 onwards)

Flexural and shear stresses – Theory of simple bending, Assumptions, derivation of equation of bending, neutral axis, determination of bending stresses, section modulus of rectangular & circular (solid & hollow), I,T, Angle, channel sections, composite beams, shear stresses in beams with derivation, shear stress distribution across various beam sections like rectangular, circular, triangular, I, T, angle sections. Combined bending and torsion, equivalent torque. Numerical problems.

UNIT-IV

Columns & Struts: Column under axial load, concept of instability and buckling, slenderness ratio, derivation of Euler's formula for crippling load for columns of different ends, concept of equivalent length, eccentric loading, Rankine formulae and other empirical relations, Numerical problems.

Slope &Deflection: Relationship between bending moment, slope & deflection, moment area method, method of integration, Macaulay's method, calculations for slope and deflection of (i) cantilevers and (ii) simply supported beams with or without overhang under concentrated load, Uniformly distributed loads or combination of concentrated and uniformly distributed loads, Numerical problems.

Text Books:

- 1. Strength of Materials R.K. Rajput, Dhanpat Rai & Sons.

		L	L T P		Theory	Sessional	Total	(Hrs.)				
ME-205N	MACHINEDRAWING	2	3	0	75	25	100	4				
Purpose	To understand how different	part	s are	asse	mbled for	an assembl	y.					
	Course	Out	com	es (C	CO)							
CO-1	Student gets aware about sur projection.	face	finis	sh of	the finishe	ed surface a	nd isom	netric				
CO-2	Student gets aware about the free hand drawings of the different joints.											
CO-3	Student gets aware about how different parts are assembled for an assembly.											

Introduction to BIS Specification SP: 46 - 1988 Code of engineering drawing –Limits, fits and Tolerance (Dimensional and Geometrical tolerance), Surface finish representation, Isometric projections from orthographic views.

UNIT-II

Dimensioning, Sectioning.

Coupling: protected unprotected flange coupling, flexible coupling, Crankshaft: overhung, disc of crank, Built up crank.

Cotter: sleeve and cotter, spigot and socket, Gib and cotter. Knuckle joint, Connecting rod, Riveted Joint. Welded Joint

UNIT-III

Assembly drawing with sectioning, bill of materials,

Assemblies: Lathe Tail stock, machine vice, pedestal bearing, drill jig and milling jig.

Text Books:

- 1. Machine Drawing by N D Bhat and V M Panchal, Charotar Publishing House
- 2. A Text Book of Machine Drawing: P S Gill , Pub.: S K Kataria& Sons
- 3. A Text Book of Machine Drawing: Dr.R.KDhawan, Pub.: S.Chand

Introduction to Mechanisms and Kinematics:

Introduction, Machines and Mechanisms, Kinematics, Mechanism Terminology, Kinematic Diagrams, Kinematic Inversion, Mobility: Gruebler's Equation, Actuators and Drivers, Commonly Used Links and Joints: Eccentric Crank, Pin-in-a-Slot Joint, Screw Joint, Special Cases of the Mobility Equation: Coincident Joints, Exceptions to the Gruebler's equation, Idle Degrees of Freedom, The Four-Bar Mechanism: Grashof 's Criterion, Double Crank, Crank-Rocker, Double Rocker, Change Point Mechanism, Triple Rocker, Slider-Crank Mechanism, Special Purpose Mechanisms: Straight-Line Mechanisms,

UNIT-II

Parallelogram Mechanisms, Quick-Return Mechanisms, Scotch Yoke Mechanism, Problems

Velocity determination: Kennedy's Space and body centroids, Relative velocity methods, Instantaneous center method,

Acceleration determination: Four link Mechanism, Acceleration of Intermediate and Offset points, Slider Crank Mechanism, Coriolis Acceleration components, Crank and slotted lever mechanism, Klein's and other constructions.

Kinematics Synthesis of Mechanisms: Number Synthesis, Frudenstein's equation, Chebyshev spacing of precisions points, Two and three position synthesis of four bar mechanisms and slider crank mechanisms, Overlay method, Bloch method and transmission angle.

UNIT-III

Mechanisms with Lower Pairs: Pantograph, straight-line motion mechanisms: accurate straight line motion mechanisms (Peaucellier, Hart and Scott Russell mechanism), approximate straight-line motion mechanisms (Grasshopper, Watt, Tchebicheff mechanism) Intermittent motion mechanisms, Parallel linkages, Engine pressure Indicators (Simplex Crosby, Thomson) Automobile steering gear mechanisms: Fundamental equation for correct steering, Davis and Ackerman steering gear, Hooke's joint (universal coupling), Double hooke's joint, Friction: Types of friction, Laws of dry friction, Motion along inclined plane Screw threads, Wedge, screw jack, pivots and collars.

Cams and Followers: Introduction, Classification of Followers, Classification of Cams, Terms used in Radial cams, Motion of the Follower,

Displacement, Velocity and Acceleration Diagrams when (i) the Follower Moves with Uniform Velocity (ii) the Follower Moves with Simple Harmonic Motion. (iii) the follower Moves with Uniform Acceleration and Retardation, Cycloidal Motion, Construction of Cam Profiles, Cams with Specified Contours, Tangent Cam with Reciprocating Roller Follower, Circular Arc Cam with Flat-faced Follower.

Belt and Chain Drives:Open and crossed belt drives, velocity ratio, slip, material for belts, crowning of pulleys, lawof belting, types of pulleys, length of belts ratio of tensions, centrifugal tension, power transmitted by belts, initial tension, creep, chain drive, chain length, classification of chains

Crystallography: Review of Crystal Structure, Space Lattice, Crystal Planes and Directions, Co-ordination Number, Number of Atoms per Unit Cell, Atomic Packing Factor; Numerical Problems Related to Crystallography.

Imperfection in Metal Crystals: Crystal Imperfections and their Classifications, Point Defects, Line Defects, Edge & Screw Dislocations, Surface Defects, Volume Defects, Effects of Imperfections on Metal Properties.

Deformation of Metal: Elastic and Plastic Deformation, Mechanism of Plastic Deformation, Twinning, Conventional and True Stress Strain Curves for Polycrystalline Materials, Yield Point Phenomena, Strain Ageing, Work Hardening, Bauschinger Effect, Recovery, ReCrystallization and Grain Growth.

UNIT-II

Phase Diagrams: Alloy Systems, Solid solutions, Hume Rothery's Rules, Phase Diagrams, Gibbs Phase Rule, TTT curve, The Lever Rule, binary phase diagrams, intermediate phases, intermetallic compounds, Applications of Phase Diagrams, Phase Transformation, Micro constituents of Fe-C system, Allotropic Forms of Iron, iron-iron carbide phase diagram, Modified Iron Carbon Phase Diagrams,

Heat treatment: Heat treatment of steels, Annealing, Normalising, Hardening, Tempering, Case Hardening, Surface Hardening, Ageing, Austempering and Martempering, Mass Effect, Equipment for Heat Treatment, Major Defects in Metals or Alloys due to faulty Heat treatment, recovery, recrystallization and grain growth. Microstructure, properties and applications of ferrous and non-ferrous alloys.

UNIT-III

Ceramics, Polymers and Composites:

Ceramics:

Structure, properties, processing and applications of traditional and advanced ceramics.

Polymers:

Classification, polymerization, structure and properties, additives for polymer products, processing and applications.

Composites: Properties and applications of various composites.

Advanced Materials:

Smart materials exhibiting ferroelectric, piezoelectric, opto-electric, semiconducting behaviour, Aerogels, photoconductivity and superconductivity, nanomaterials, biomaterials, super alloys, shape memory alloys, Liquid crystals, Carbon Nanotubes, Graphene and Fullerenes.

UNIT-IV

Materials Characterization Techniques:

Characterization techniques such as, scanning electron microscopy, transmission electron microscopy, atomic force microscopy, scanning tunnelling microscopy, atomic absorption spectroscopy, differential scanning calorimetry.

Failure of Materials:

Fatigue: Fatigue fracture, fatigue failure, Mechanism of Fatigue Failure, Design for Fatigue, Fatigue Life calculations, Fatigue Tests, Rotating Beam Fatigue Test, Wohler Fatigue Test, Theories of Fatigue, Corrosion Fatigue,

Creep: Creep Curve, Creep Curve equations, Types of Creep, Factors affecting Creep, Mechanism of Creep, Creep Resistant Material, Creep Fracture, Creep Test, Stress Rupture test,

	B. Tech. 3 rd Semester Mechanical Engineering										
Course No.	Course Title	Teaching		Allotm	ent of Ma	rks	Duration				
		Sch	Schedule			of Exam					
		L	L T P		Sessional	Practical	Total	(Hrs.)			
ME-211N	INEMATIC OFMACHINES LAB 0 0 2 40 60 100 3										
Purpose	To make students understand various kinds of mechanisms working around in industries										
	and routine life.										
	Course Outcom	nes (C	CO)								
CO-1	To learn about various types of basic	mec	hani	ism	s & their ap	plications.	(
CO-2	To learn about complex mechanic	isms į	orac	tica	lly used in	machines.					
CO-3	To learn about steering mechanism used in automobiles										
CO-4	To learn about the working of various joints like Hooke's joint.										

List of experiments

- 1. To Study of the inversions of the single slider crank mechanism.
- 2. To verify the law of moment using Bell- crank lever.
- 3. To determine velocity & acceleration of slider in slider-crank mechanism and plot the following:
 - a. θ v/s x (displacement of slider)
 - b. θ v/s velocity and
 - c. θ v/s acceleration.

Compare the values of velocities & acceleration with those obtained theoretically.(Assume ω =I rad/sec.).

- 4. To determine experimentally the ratio of the cutting time to idle time (cutting stroke to idle stroke) of the crank and slotted lever (QRM)/ Whitworth and compare the result to theoretical values plot the following
 - a. θ v/s X (displacement of slider).
 - b. θ v/s velocity.
 - c. θ v/s Acceleration and to compare the values of velocities

(Take angles $\theta = 45^{\circ}$, 90° , 135° , 225° , 270° & 335° , $\omega = 1$ rad/s)

- 5. To determine the displacement, velocities, & accelerations of the driven shaft of a Hooke's joint for a constant speed of the driver shaft.
- 6. To study various types of steering mechanisms.
- 7. To determine the value of coefficient of friction between the screw and nut of the jack, while:
 - a. Raising the load
 - b. Lowering the load
- 8. To draw experimentally a curve of the follower-displacement v/s cam-angle. Differentiate the above curve to get velocity and acceleration plot and compare the values with those obtained analytically
- 9. To determine the coefficient of friction between belt and pulley and plot a graph between $log_{10} T_1/T_2 v/s$, θ .
- 10. To determine the value of coefficient of friction for a given pair of surfaces using friction apparatus.
- 11. To find out experimentally the coriolis component of acceleration and compare with theoretical values.

Note: Any 8 experiments from the above list and other 2 from others (developed by institute) are required to be performed by students in the laboratory.

	B. Tech. 3 rd Semester Mechanical Engineering										
Course No.	Course Title	Tea	achii	ıg	Allotn	nent of Ma	rks	Duration			
		Scl	Schedule					of Exam			
		L	T	P	Sessional	Sessional Practical		(Hrs.)			
ME-213N	MATERIALSCIENCE	0	0	2	40	60	100	3			
	<u>LAB</u>	<u>LAB</u>									
Purpose	To make the students aware of material structure and properties of material using										
different experiments.											
	Course (Outo	ome	s (CC))						
CO-1	Ability to design and conduct	exp	erim	ents,	acquire data	, analyze aı	nd interp	ret data			
CO-2	Ability to determine the gra	in s	ize a	and s	train harder	ning pheno	menon i	n different			
	metals by means of experimen	nts.									
CO-3	Ability to learn about stress	co	ncent	ratio	n factor and	d microstru	ictures o	of different			
	materials.										
CO-4	To learn about heat treatment processes through experiments.										
CO-5	Ability to perform Fatigue and	d cre	eep te	est on	different m	aterials.					

List of Experiments:

- 1. To study crystal structures with the help of models.
- 2. To study crystal imperfections with the help of models.
- 3. Determination of grain size for a given specimen
- 4. To determine the stress concentration factor at a geometrical discontinuity
- 5. 5.To observe and learn about the strain hardening effect in metals.
- 6. Comparative study of microstructures of different specimens of different materials (Mild steel, Gray C.I., Brass, Copper, Aluminium etc.)
- 7. To prepare a small specimen and mount it using hot mounting press.
- 8. To harden and temper a given steel specimen.
- 9. To anneal a given hardened steel specimen.
- 10. To analyse microstructure of quench hardened steel specimen.
- 11. To perform Fatigue test on fatigue testing machine.
- 12. To perform Creep test on creep testing machine.

Note: Any 8 experiments from the above list and other 2 from others (developed by institute) are required to be performed by students in the laboratory.

	B. Tech. 3 rd Semester Mechanical Engineering											
Course No.	Course Title		ach hed	_	Allotm	ent of Ma	arks	Duration of Exam				
		L	T	P	Sessional	Practical	Total	(Hrs.)				
ME-215N	MECHANICSOF SOLIDS LAB	0	0	2	40	60	100	3				
Purpose	To make the students aware of different properties of material using different experiments.											
	Course Outcomes (CO)											
CO-1	Ability to design and conduct experir	nen	ts, a	cqui	ire data, ar	nalyze and	l interpi	et data				
CO-2	Ability to determine the behavior of stresses by means of experiments	f fe	rrou	ıs n	netals sub	jected to	normal	and shear				
CO-3	Ability to determine the behavior of stension, compression, shear, bending.											
CO-4	Physical insight into the behavior distribution of stresses and strains, de						ements,	including				
CO-5	Write individual and group reports: p results, synthesize and discuss the tes				ctives, des	cribe test	procedu	ires and				

List of Experiments:

- 1. To study the Brinell hardness testing machine & perform the Brinell hardness test.
- 2. To study the Rockwell hardness testing machine & perform the Rockwell hardness test.
- 3. To study the Vickers hardness testing machine & perform the Vickers hardness test.
- 4. To study the Erichson sheet metal testing machine & perform the Erichson sheet metal test.
- 5. To study the Impact testing machine and perform the Impact tests (Izod & Charpy).
- 6. To study the Universal testing machine and perform the tensile, compression & bending tests.
- 7. To perform the shear test on UTM.
- 8. To study the torsion testing machine and perform the torsion test.
- 9. To draw shear Force, Bending Moment Diagrams for a simply Supported Beam under Point and Distributed Loads.
- 10. To prepare the composite specimen using hot compression molding machine and test on UTM.
- 11. To view and measure the principal stress components and directions of principal stresses by the photo elastic method using 12" Diffused Light Research Polariscope.

Note: Any 8 experiments from the above list and other 2 from others (developed by institute) are required to be performed by students in the laboratory.

	To learn the multidisciplinary nature, scope and importance of Environmental Studies											
Purpose												
	Course Out	tcoı	mes	(CO)	Į.							
CO-1	Basic concepts of Various kinds of M	licr	oscop	y and	d Centrifug	ation Techn	iques					
CO-2	To learn the theoretical and prac	tica	ıl ası	pects	of Electro	phoresis ar	d Chro	matography				
	Techniques											
CO-3	To learn the concepts of different kinds of Spectroscopy and Colourimetry											
CO-4	To understand the concept of radioisotope techniques and their applications in research											

UNIT 1

The multidisciplinary nature of environmental studies. Definition, Scope and Importance. Need for public awareness. Natural Resources: Renewable and Non-Renewable Resources: Natural resources and associated problems.

- (a) Forest Resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
- (b) Water Resources- Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
- (c) Mineral Resources- Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
- (d) Food Resources- World Food Problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
- (e) Energy Resources- Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.
- (f) Land Resources- Land as a resource, land, degradation, man induced landslides, soil erosion and desertification.

Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyle.

UNIT II

Ecosystem-Concept of an ecosystem.Structure and function of an ecosystem.Producers, consumers and decomposers.Energy flow in the ecosystem.Ecological Succession.Food Chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem-

- a. Forest Ecosystem
- b. Grassland Ecosystem
- c. Desert Ecosystem
- d. Aquatic Ecosystems(ponds, streams, lakes, rivers, oceans, estuaries

Field Work: Visit to a local area to document Environment

ssetsriver/forest/grassland/hill/mountain.Visit to a local polluted site- Urban/Rural Industrial / Agricultural. Study of common plants, insects and birds. Study of simple ecosystems-pond, river, hill, slopes etc. (Field work equal to 5 lecture hours).

UNIT III

Biodiversity and its conservation. Introduction, Definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity of global, National and local levels. India as a mega-diversity nation Hot spots of Biodiversity. Threats to biodiversity: Habitat loss, poaching of wild life, man-wildlife conflicts. Endangered and endemic species of India.Conservation of Biodiversity- In situ and Ex-Situ conservation of biodiversity.

Environmental Pollution Definition. Cause, effects and control measures of- (a) Air Pollution (b) Water Pollution (c) Soil Pollution (d) Marine Pollution (e) Noise Pollution (f) Thermal Pollution (g) Nuclear Hazards

Solid waste management- cause, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management:floods, earthquake, cyclone and landslides

UNIT IV

Social Issues and the Environment.From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people: Its problems and concerns. Case Studies.Environmental ethics-issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.Wasteland ReclamationConsumerism and waste products.Environment Protection Act.Air (Prevention and Control of Pollution) Act.Water (Prevention and Control of Pollution) Act.Wildlife Protection Act.Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public Awareness. Human population and the Environment.Population growth, variation among nations. Population explosion-Family Welfare Programme. Environment and human health.Human rights.Value Education.HIV/AIDS, Women and Child Welfare.Role of Information Technology in Environment and Human Health.Case Studies.

Text Books

- 1. Environmental Studies- Deswal and Deswal. Dhanpat Rai & Co.
- 2. Environmental Science & Engineering Anandan, P. and Kumaravelan, R. 2009. Scitech Publications (India) Pvt. Ltd., India
- 3. Environmental Studies. Daniels Ranjit R. J. and Krishnaswamy. 2013. Wiley India.
- 4. Environmental Science-Botkin and Keller. 2012. Wiley, India

Note: Examiner will set eight questions by selecting two from each unit. Students will be required to attempt five questions selecting at least one question from each unit.
