ME-302N	REFRIGERATION	3	3 1 0		75	25	100	3				
	AND AIR-											
	CONDITIONING											
Purpose	The objective of this course is to make the students aware of refrigeration, Airconditioning, various methods of refrigeration. The course will help the students to build the fundamental concepts in order to solve engineering problems and to design HVAC applications.											
Course Outo	comes											
CO 1	Understanding of different refrigeration, refrigeration l											
CO 2	Identify, formulate and sabsorption refrigeration pro			refrig	geration, v	apour refr	igeration	and vapour				
CO 3	Identify and understand environmental effects etc.	refi	rigera	nts an	d their us	ses as per	their p	roperties and				
CO 4	Knowledge of psychometr cooling and heating process				•			e analysis and the second seco				
CO 5	Design of various air-cond gain.	itio	ning	system	s by includ	ing the inte	ernal and	external heat				

(a) REFRIGERATION UNIT I

Basics of heat pump & refrigerator; Carnot's refrigeration and heat pump; Units of refrigeration; COP of refrigerator and heat pump; Carnot's COP; ICE refrigeration; evaporative refrigeration; refrigeration by expansion of air; refrigeration by throttling of gas; Vapour refrigeration system; steam jet refrigeration; thermoelectric cooling; adiabatic demagnetization.

Basic principles of operation of air refrigeration system, Bell-Coleman air refrigerator; advantages of using air-refrigeration in aircrafts; disadvantages of air refrigeration in comparison to other cold producing methods; simple air refrigeration in air craft; simple evaporative type air refrigeration in aircraft; necessity of cooling the aircraft.

UNIT II

Simple Vapour Compression Refrigeration System; different compression processes(wet compression, dry or dry and saturated compression, superheated compression); Limitations of vapour compression refrigeration system if used on reverse Carnot cycle; representation of theoretical and actual cycle on T-S and P-H charts; effects of operating conditions on the performance of the system; advantages of vapour compression system over air refrigeration system.

Methods of improving COP; flash chamber; flash inter cooler; optimum interstate pressure for two stage refrigeration system; single expansion and multi expansion processes; basic introduction of single load and multi load systems; Cascade systems.

Basic absorption system; COP and Maximum COP of the absorption system; actual NH₃ absorption system; functions of various components; Li-Br absorption system; selection of refrigerant and absorbent pair in vapour absorption system; Electro refrigerator; Comparison of Compression and Absorption refrigeration systems; nomenclature of refrigerants; desirable properties of refrigerants; cold storage and ice-plants.

(b) AIR-CONDITIONING UNIT III

Difference in refrigeration and air conditioning; Psychometric properties of moist air (wet bulb, dry bulb, dew point temperature, relative and specific humidity of moist air, temperature of adiabatic saturation); empirical relation to calculate P_v in moist air.

Psychometric chart, construction and use, mixing of two air streams; sensible heating and cooling; latent heating and cooling; humidification and dehumidification; cooling with dehumidification; cooling with adiabatic humidification; heating and humidification; by-pass factor of coil; sensible heat factor; ADP of cooling coil; Air washer.

UNIT IV

Classification; factors affecting air conditioning systems; comfort air-conditioning system; winter air conditioning system; summer air- conditioning system; year round air conditioning. unitary air-conditioning system; central air conditioning system; room sensible heat factor; Grand sensible heat factor; effective room sensible heat factor.

Inside design conditions; comfort conditions; components of cooling loads; internal heat gains from (occupancy, lighting, appliances, product and processes); system heat gain (supply air duct, A.C. fan, return air duct); external heat gain (heat gain through building, solar heat gains through outside walls and roofs); solar air temperature; solar heat gain through glass areas; heat gain due to ventilation and infiltration.

Transport air conditioning; evaporative condensers, cooling towers; heat pumps.

Text books

- 1. Basic Refrigeration and air-conditioning by Annanthana and Rayanan, TMG
- 2. Refrigeration and air-conditioning by R.C.Arora, PHI

References books

- 1. Refrigeration and air-conditioning by C.P arora
- 2. Refrigeration and air-conditioning by Arora and Domkundwar, Dhanpat rai

NOTE: In the semester examination, the examiner will set 8 questions in all, at least one question from each unit, and students will be required to attempt only 5 questions.

	B. Tech. 6 th Se	eme	ester I	Mecha	nical Engi	neering							
Course No.	Course Title	Teaching Schedule		Allotn	Duration of Exam								
		L	L T P		Theory	Sessional	Total	(Hrs.)					
ME-304N	Tribology & Mechanical	3 1 0			75	25	100	3					
	Vibration												
Purpose:	To understand the vibration	To understand the vibration systems with different degrees of freedom in different											
	modes and conditions and the basics of tribology.												
		Co	urse (Outcor	nes								
CO 1	To understand the fundam			vibrati	ions and st	udy the sys	tems in	single D.O.F.					
	under free and damped vib	ratio	ons.										
CO 2	To study and analyze the d	iffe	rent ty	pes of	forced vib	ration system	m in sing	gle D.O.F.					
CO 3	To understand the concept	of p	rincip	le mo	des of vibra	tions using	differen	t methods and					
	study lateral, longitudinal	and	l tors	ional v	ibration in	case of be	eams, ba	ars and shafts					
	respectively.												
CO 4	To understand the fundame	enta	ls of t	ribolog	gy of lubric	ation, friction	on and w	ear.					

UNIT I

Fundamentals of Vibration: Elements of a vibratory system, S.H.M., degrees of freedom, Types of vibrations, Work done by a harmonic force, Beats. **Undamped free vibrations:** Natural frequency by equilibrium and energy methods, equivalent spring, linear and torsional systems, compound pendulum, Bifilar and Trifilar suspensions.

Damped free vibrations: Different types of damping, differential equations of damped free vibrations, initial conditions, logarithmic decrement, vibrational energy and logarithmic decrement.

UNIT II

Single Degree of Freedom Systems- Forced Vibrations: Sources of excitation, equations of motion with harmonic force, response of rotating and reciprocating unbalanced system, Support motion, Vibration Isolation, Force and Motion transmissibility.

Forced vibrations with coloumb damping, structural damping and viscous dampings.

UNIT III

Multi-degree of freedom systems: Principle modes of vibrations, Influence co-efficient, Matrix method, orthogonality principle, Dunkerleys equation, Matrix iteration method, Holzer Method, Rayleigh Method and Rayleigh-Ritz methods, Stodola method, Hamilton principle.

Continuous systems: Transverse vibrations of strings, Longitudinal Vibrations of bars, Lateral vibration of beams, Torsional vibration of circular shafts.

UNIT IV

Introduction to Tribology, Tribology in design, Tribology in industry, economic aspects of Tribology, **Lubrication:** Basic modes of lubrication, lubricants, properties of lubricants - physical and chemical, types of additives, extreme pressure lubricants, recycling of used oils and oil conservation, disposal of scrap oil, oil emulsion.

Friction and Wear: Introduction, laws of friction, kinds of friction, causes of friction, friction measurement, theories of friction, effect of surface preparation. Introduction to Wear, Types of wear, various factors affecting wear, measurement of wear, wear between solids and liquids, theories of wear.

Text Books:

- 1. Grover G. K. "Mechanical Vibrations", Nem Chand and Bros., Roorkee
- 2. Meirovitch, "Elements of Mechanical Vibrations", McGraw Hill

- 3. J.S.Rao and K.Gupta, 'Introductory course on theory and practice of Mechanical Vibration, New Age International.
- 4. Friction and wear of Materials- By E. Robinowicz, Johan Wiley
- 5. Tribology an Introduction By Sushil Kumar Srivastava
- 6. B. C. Majumdar, "Introduction to Tribology and Bearings", S.Chand and Company Ltd. New Delhi.

Reference Books:

- 1. Rao S. S. "Mechanical Vibrations", Pearson Education Inc. Dorling Kindersley (India) Pvt. Ltd. New Delhi.
- 2. V.P. Singh, "Mechanical Vibrations", Dhanpat Rai & Co. Pvt. Ltd., Delhi
- 3. Prashant Sahoo, "Engineering Tribology", PHI publications.
- 4. Halling J., "Principles of Tribology", McMillan Press Ltd.

NOTE: In the semester examination, the examiner will set 8 questions in all, at least one question from each unit, and students will be required to attempt only 5 questions.

	RESEARCH											
Purpose	To make the students av	To make the students aware of various optimization techniques used for solving										
	engineering problems.											
		Co	urse (Outcor	nes							
CO1	To study necessity, applica	tion	is, sco	pe rela	ated to indu	ıstry. To ma	ake the s	tudents aware				
	of linear programming and	its	graph	ical rep	presentation	1.						
CO 2	To minimize the transport	rtati	on co	ost usi	ng transpo	rtation mo	dels. To	discuss and				
	understand the network and	alys	is rep	resenta	tions.							
CO 3	To understand simulation.	Its	appli	cations	, merits an	d demerits.	Further	more, waiting				
	line theory and decision the	eory	are a	lso hel	pful to solv	e various e	ngineeri	ng problems.				
CO 4	Solve the problems related	to (Queui	ng theo	ory and gan	ne theory.						

UNIT 1

Introduction: Definition and Development of Operations Research, Necessity and scope of OR in Industry, Operations Research in Decision making, Models in OR, Fields of application, Difficulties and Limitation of OR.

General Linear Programming Problems: Introduction, Maximization and minimization of function with or without Constraints, Formulation of a linear programming problem, Graphical method and Simplex method, Big M method, Degeneracy, Application of linear Programming (LPP) in Mechanical Engineering.

UNIT 2

The Transportation Problems: Mathematical formulation, Stepping stone method, Modified Distribution Method, Vogels Approximation Method, Solution of balanced and unbalanced transportation problems and case of degeneracy, Assignment problems, Least time transportation problem

Network Analysis: CPM/PERT, Network Representation, Techniques for drawing network, Numbering of events (Fulkersen Rule), PERT calculations - Forward path, back-ward path, Slack, probability, comparison with PERT, Critical path, Float, Project cost, Crashing the net work, updating (PERT and CPM).

UNIT 3

Simulation: Basic concept of simulation, Applications of simulation, Merits and demerits of simulation, Monte Carlo simulation, Simulation of Inventory system, Simulation of Queuing system.

Waiting Line Theory: Basic queuing process, Basic structure of queuing models, some commonly known queuing situations, Kendall's notation, Solution to M/M/1: ∞ /FCFS models.

Decision Theory: Steps in decision theory approach, Decision Machinery environment, Decision machining under certainty and uncertainty, Decision machining under condition of risk, Decision trees, Minimum enchained criteria, Advantages and limitations of decision tree solutions, Post Optimality.

Unit 4

Queuing Theory: Introduction, Applications of queuing Theory, Waiting time and idle time costs, Single channel queuing theory and multi-channel queuing theory with Poisson arrivals and exponential services, Numerical on single channel and multi channel queuing theory.

Game Theory: Theory of games, competitive games, Rules and Terminology in game Theory, Rules for game theory- saddle point, dominance, Mixed strategy (2 x2 games), Mixed strategy (2 x n games or m x 2 games), Mixed strategy (3 x3 games), Two person zero sum games, N-person zero sum games.

Text books

- 1. Operations Research by Prem Kumar Gupta and D. S. Heera, S. Chand Publications
- 2. Introduction to Operations Research, by F.S. Hillier and G.J. Lieberman, seventh edition, McGraw Hill publications

Reference Books:

- 1. Introduction to Mathematical Programming by Winston, W.L. (4th ed.), Duxbury Press.
- 2. Operations Research by P Sankara Iyer, Mc Graw Hill publications.

NOTE: In the semester examination, the examiner will set 8 questions in all, at least one question from each unit, and students will be required to attempt only 5 questions.

For Mechanical Engg, Electronics Engg and Bio Tech Engg students only

B. Tech. 6 th Semester Mechanical Engineering												
Course No.	Course Title	Teaching Schedule		Allotr	Duration of Exam							
		L	T	P	Theory	heory Sessional		(Hrs.)				
CSE-209N	ESSENTIALS OF IT	3	1 0		75	25	100	3				
Purpose	To introduce the concepts of Object Oriented Programming using Java and RDBMS											
	CO	DUF	RSE (OUTC	OMES							
CO-1	Solve Problems using var	ious	effic	ient an	d reliable A	Algorithms						
CO-2	Design and Study the basis	ic co	oncep	ts in Ja	va							
CO-3	Document and implement	Ob	ject o	riented	paradigms	and design	models	in Java				
CO-4	Design and study RDBMS	S M	odelii	ng and	its prograr	n implemen	itation					

UNIT I

Problem Solving Techniques: Introduction to Problem Solving, Introduction to Algorithms and Flowchart, Searching algorithms: Linear search, Binary search and Sorting algorithms: Insertion and Selection sort, Basic Data Structures: Stack, and Linear Queue.

UNIT II

Programming Basics: Identifiers, Variables, Data Types, Operators, Control Structures: Loop, If else, Nested If, Switch Statement, Arrays, Strings, Object Oriented Concepts: Class & Object, Operator, Instance Variables & Methods, Access Specifiers, Reference Variables: This, Super, Parameter Passing Techniques, Constructors, Static, and Command Line Arguments.

UNIT III

Relationships: Inheritance, Types of Inheritance, Static Polymorphism: Method Overloading, Constructor Overloading, Method Overriding, Abstract, Interface, Introduction to Packages.

UNIT IV

RDBMS: Data Processing, Database Technology, Data Models, Data Independence, ER Modeling Concept, ER-notations, Converting ER Diagram into Relational Schema, Definition of Keys: Primary key, Foreign key, UniqueKey.

SQL: DDL Statements, DML Statements, DCL Statements, Joins, Sub queries, Views.

Books on Java

- 1. Java: The Complete Reference, Seventh Edition. Herbert Schildt, McGraw-Hill Education. Programming with Java 3e A Primer, E Balagurusamy, McGraw Hill Education.
- 2. Introduction to Java Programming, K. Somasundaram , Jaico Publishing House; 1st edition

Books on RDBMS, Oracle, MYSQL

- 1. Fundamentals of Database Systems, with E-book (3rd Edition) by Shamkant B.Navathe, Ramez Elmasri, Published by Addison Wesley Longman, January 15th, 2002
- 2. MySQL by Paul DuBois Published by New Riders.
- 3. Murach's MySQL Paperback, Joel Murach, Published by Shroff/Murach, 2012.
- 4. SQL: The Complete Reference, James R. Groff, Paul N. Weinberg, Published by McGraw-Hill Companies, March 1999.
- 5. Schaum's Outline of Fundamentals of Relational Databases, Ramon Mata-Toledo, Published by McGraw-Hill, 2000.

NOTE: In the semester examination, the examiner will set 8 questions in all, at least one question from each unit, and students will be required to attempt only 5 questions.

Course	Course Title	T	each	ning	Allotn	Allotment of Marks			
No.		So	hec	lule		of Exam			
		L	T	P	Theory	Sessional	Total	(Hrs.)	
ME-308N	COMPUTER AIDED DESIGN AND	4	0	0	75	25	100	3	
	MANUFACTURING								
Purpose	The subject empowers the students to know about the extreme function of computer in								
	designing, manufacturing as well as in the business scenario.								
	Course Outo	com	ies						
CO1	Student gets aware about the introduction	n o	f C	AD/	CAM, ar	nd CIM.	Γhis un	it explains	
	the history and application CAD/CAM.							1426	
CO 2	Student gets aware about the Modeling	of c	liffe	erent	types of	curves,	surface	and solid.	
	The modeling is used for further analysis	S			1000M S				
CO 3	To know about the transformation of poi	nts	and	line	s in com	puter aide	ed softv	vare.	
	Group technology is used for utilization	ma	chir	ies.					
CO 4	Student knows the usages of the numeric	al c	ont	rol n	nachines	and its co	ode.		
	How computer is useful in making the pr	oce	ess p	olann	ing.				

UNIT-I

Introduction to CAD/CAM, Historical Development, Industrial look at CAD/CAM Application of CA/CAM, Display devices, Input/ Output Devices, CPU.

Introduction to CIM, Definition, Nature of Elements of CIM, CIM Wheel,

Introduction to computer aided quality control, Contact and Non Conduct Inspection Method.

UNIT-II

Wireframe modeling, Representation of curves, Parametric and non-parametric curves, straight lines, Hermite cubic splines, B splines curves.

Plane surface, ruled surface, surface of revolution, bi-cubic surface, Bezier surface, B spline surface, Solid modeling, boundary representation, sweeping, parametric solid modeling.

UNIT-III

Introduction, Transformation of points & line, 2-D translation, rotation, Reflection, Scaling, shearing and combined transformation, Homogeneous coordinates, Orthographic and perspective Projections.

Group technology, Part families, Part classification and coding, Optiz method, product flow analysis, Machine cell Design, Advantages of GT

UNIT-IV

Numerical control, Types of NC systems, MCU & other components, Co-ordinate system, NC manual part programming, G & M codes, part program for simple parts, Computer assisted part programming.

Introduction, FMS component, Types of FMS, FMS layout, planning for FMS, advantage and applications

Introduction, conventional process planning, Steps in variant process planning, types of CAPP, planning for CAPP

Purpose	To deal effectively with eng	To deal effectively with engineering problems associated with an individual machine										
	component.											
		Cou	rse O	utcom	es							
CO 1	To analyze the force compo	nen	ts act	ing on	the gears	and solve	design p	roblems of				
	different types of gears.						20000					
CO 2	To solve design problems of	belt	s, cha	ains, pu	alleys and f	riction clute	ches and	brakes.				
CO 3	To make selection of bearing	gs fr	om n	nanufa	cturer's cata	alogue and	solve sp	ring design				
	problems.					225471	986					
CO 4	To design and solve the prob	lem	s of I	C engi	ne compon	ents and fly	wheels.					

UNIT-I

Gear Drives: Classification of gears, selection of type of gears, law of gearing, standard systems of gear tooth, interference and undercutting, backlash, Spur Gears: geometry and nomenclature, force analysis, material selection, beam strength of gear tooth, effective load on gear tooth, module estimation based on beam strength, wear strength of gear tooth, module estimation based on wear strength, spur gear design procedure. Helical Gears: geometry and nomenclature, force analysis, beam strength of helical gears, effective load on gear tooth, wear strength of helical gears, design procedure. Bevel Gears: geometry and nomenclature, force analysis, beam strength of bevel gears, effective load on gear tooth, wear strength of bevel gears, design procedure. Worm Gears: terminology, force analysis, friction in worm gears, material selection, strength rating and wear rating, thermal considerations and design procedure.

UNIT-II

Flat Belt Drives and Pulleys: Introduction, Selection of flat belts from manufacturer's catalogue, Pulleys for flat belts. **V-Belts and Pulley:** selection of V-Belts and V-grooved pulley. **Chain Drives:** roller chains, geometric relationships, polygonal effect, power rating, sprocket wheels, design of chain drives, chain lubrication.

Clutches: Various types of clutches in use, design of friction clutches-single disc, multidisc, cone & centrifugal, torque transmitting capacity, friction materials, thermal considerations. **Brakes:** Various types of brakes, self-energizing condition of brakes, design of shoe brakes – internal & external expanding, band brakes, thermal considerations in brake designing.

UNIT-III

Springs: Types of springs, design for helical springs against tension and their uses, compression and fluctuating loads, design of leaf springs, surging in springs.

Bearings: Classification, selection of bearing type, static and dynamic load carrying capacity, equivalent bearing load, load-life relationship, selection of bearings from manufacturer's catalogue, selection of taper roller bearing, design for cyclic loads and speeds, bearing failure-causes and analysis. **Sliding Contact Bearings:** design of journal bearings using Raimondi and Boyd's Charts.

UNIT IV

I.C. Engine Components: Design of cylinder, design of studs for cylinder head, design of piston, design of crank shaft, design of connecting rod.

Flywheel: Flywheel materials, torque analysis, coefficient of fluctuation of energy, design of solid disc and rimmed flywheel.

Purpose	To make students understand about the applications of refrigeration and Airconditioning.											
				Cours	e Outcome	es:						
CO1	To understand about	the	basic	s and	working pri	nciple of w	ater coo	oler.				
CO2	Identify the differen	t cy	cle of	operat	ion in air-c	onditioning						
CO3	To analyze the humi	idity	meas	sureme	nt and its in	nportance i	n air-cor	nditioning				
CO4	To learn about the conditioning system		ous c	ontrol	devices and	d parts of 1	efrigerat	tion and air-				

List of Experiments

- 1. To study and perform experiment on basic vapour compression Refrigeration Cycle.
- 2. To study and perform experiment on Solar Air-conditioner based on vapour absorption cycle.
- 3. To find COP of water cooler.
- 4. To study and perform experiments on compound compression and multi-load systems.
- 5. To study and perform experiment on vapour absorption apparatus.
- 6. Perform the experiment & calculate various performance parameters on a blower apparatus.
- 7. To find the performance parameter of cooling tower.
- 8. To study various components in room air conditioner.
- 9. To find RH of atmospheric air by using Sling Psychrometer.
- 10. To find performance of a refrigeration test rig system by using different expansion devices.
- 11. To study different control devices of a refrigeration system.
- 12. To find the performance parameters of Ice Plant.

Note: Any 8 experiments from the above list and other 2 from others (developed by institute) are required to be performed by students in the laboratory.

		L	T	P	Sessional Practical		Total	(Hrs.)			
ME-314N	TRIBOLOGY &	0	0	2	40	60	100	3			
	MECHANICAL										
	VIBRATION LAB										
Purpose:	To make the students understand about the tribological properties of specimen										
	and principles of vibration.										
		Co	urs	e ou	tcomes:						
CO 1	To understand the concept o	f slic	ling	and	abrasive v	wear using	wear a	nd friction			
	monitoring apparatus and dr	y abı	asio	n te	ster.						
CO 2	To measure the extreme pres	ssure	pro	perti	ies of a lub	ricant usir	ng four	ball tester.			
CO 3	To study the concept of free	and	forc	ed v	vibration f	or a spring	mass s	ystem and			
	determine the natural freque	ncy.				- Jan					

LIST OF EXPERIMENTS:

- 1. To study undamped free vibrations of equivalent spring mass system and determine the natural frequency.
- 2. To study the free vibration of system for different damper settings. Draw decay curve and determine the log decrement and damping factor. Find also the natural frequency.
- 3. To study the torsional vibration of a single rotor shaft system and determine the natural frequency.
- 4. To determine the radius of gyration of given bar using bifilar suspension.
- 5. To verify the dunker ley's rule.
- 6. To study the forced vibration of system with damping. Load magnification factor vs. Frequency and phase angle vs frequency curves. Also determine the damping factor.
- 7. To determine the two frequencies of torsional spring type double pendulum & compare them with theoretical values.
- 8. To determine the radius of gyration of a compound pendulum.
- 9. To determine the radius of gyration of disc using trifilar suspension.
- 10. To determine the wear rate, friction force and coefficient of friction of a metallic pin/ball by using wear and friction monitor apparatus.
- 11. To determine abrasion index of a material with the help of dry abrasion test rig.
- 12. To evaluate the wear and extreme pressure properties of a lubricating oil by using four ball tester.

Note: Any 8 experiments from the above list and other 2 from others (developed by institute) are required to be performed by students in the laboratory.

CO 4	Students will aware about the N	VC	part	pro	gramming	and OPT	ZE me	ethod.	

List of experiments:

- To study the 2 dimensional drawing, orthographic views, front view, top view and side view.
- 2 To study the wireframe, surface and solid modelling.
- 3 Draw the part drawing of product 1 using any 3D software.
- 4 Draw the part drawing of product 2 using any 3D software.
- 5 Make assembly by using any 3D software.
- 6 To study the G codes and M codes.
- Write a NC program for milling operation.
- 8 Write a NC program for drilling operation.
- 9 Write a NC program for turning operation.
- 10 To study the optiz method.

Note: Any 8 experiments from the above list and other 2 from others (developed by institute) are required to be performed by students in the laboratory. Product 1 and Product 2 must be based on ME 308N.
